The investment mechanism of the mesoeconomics allows to manage not only the investment sphere, but also serves as the basis for managing the sectors of the national economy. The creation of a regional investment mechanism creates the conditions for the rapid adaptation of the investment sphere of the region and the entire mesoeconomics to the dynamics of factors of the internal and external environment.

The formation of an effective investment mechanism of a region is possible only with the participation of regional authorities, since they determine the essence of the mechanism itself and what role it will play in the economic space of the region.

Keywords: investment, investment mechanism, region, investment attractiveness, accelerated development.
