The generally accepted methods for evaluating bulls by the quality of offspring, comparing the productivity of daughters with their age-mate girls and mothers do not always reveal their breeding value, establish compatibility with cows of different productivity. The work is devoted to the analysis of various options for selection, contributing to the possibility of establishing boundaries on compatibility and improving the efficiency of the use of bulls.

Keywords: Red steppe and red-mottled Holstein breeds, sire bulls (sires), breeding value, quality assessment of offspring, compatibility.

Gubzhokov Murat Alisagovich, staff scientist, Laboratory of breeding and production technology of livestock products of the Institute of Agriculture - branch of the Kabardin-Balkar Scientific Center of the Russian Academy of Sciences.
