*The determining factor for the development and effective functioning of production systems is the successful operation of its components – industry branches and entities. It is obvious that the productivity of the agricultural sector is largely determined by the current management system. The need to control the reproductive process in the agricultural production requires special attention; it is different from other types of activity for its specificity and dependence on environmental factors.*

*The purpose of the article is to develop the theoretical foundations of management of the reproduction process in the agricultural sector. Research aspects of the reproductive process is particularly relevant for agricultural production, as it is associated with some factors on which a person can not influence.*

*Progressive development of the agricultural sector is possible with the organization of expanded reproduction. It can be carried out in two ways - extensively and intensively. In modern conditions, the use of information and digital technologies make it possible to use both ways of development, the choice depends on the subjects of the economy.*

*The methodological basis of the article is the theory of reproduction. The study used such economic methods as: analysis, synthesis, generalization.*

**Key words:** management, agricultural sector, agriculture, reproduction, extensive type, intensive type.
