The article analyzes the current state and prospects of development of the electric power system of the region on the example of the Chechen Republic. The characteristic of subjects of the electric power industry forming a regional power system and the main consumers of electric energy in the Chechen Republic is presented. Special attention is paid to measures to reduce electricity losses in electric networks and on the organization of electricity metering in the framework of the Program of decrease in losses of electric energy in electric networks of JSC «Chechenenergo» for 2018-2022.

Keywords: Chechen Republic, electric power system, power losses.
