**Annotation.** When growing cultivated plants of the field and fruit trees of the garden, one of the most important indicators of the effectiveness of the agricultural equipment and various kinds of chemicals and mineral fertilizers used is harvesting without quantitative and qualitative losses. Choosing the right methods to protect plants from pests, diseases and weeds can save crops and orchards from significant crop losses, lead to higher yields and increased income.

**Keywords:** plant protection, precision farming, hardware and software systems, robotic systems, intelligent systems, agriculture, agricultural producers, plants
