Abstract. The article examines issues of integration processes that have affected virtually all areas of agricultural business. Foreign and domestic experience confirms that large food companies achieve increased production efficiency and high competitiveness. Along with the fact that they hold the product market, they also have the opportunity to motivate producers of raw materials, using various areas of integration and cooperation. The history of integration processes development both in Russia and abroad confirms their effectiveness by combining all the resources of the integrating structures, while maintaining legal independence. An analysis of the development of integration processes in Russia has revealed the high efficiency and effectiveness of the integration of various forms and types of agro-industrial formations. The conducted research made it possible to substantiate the need for further development and intensification of integration processes in the agro-industrial complex, allowing to unite various forms and types of economic entities, and to form a powerful potential for the further breakthrough development of the country's agro-industrial complex in the conditions of digital transformation of the economy.

Keywords: agro-industrial complex, agro-industrial formations, agro-industrial holding, integration, cooperation, agriculture
